Bangladesh	105	6%	4	Nigeria	113	9%
Vietnam	78	5%	5	Bangladesh	88	7%

First day of class enrolment does not include medical residents and non-degree students. These students will be included in the Fall Census Enrolment Snapshot.

Total Enrolment

Description A headcount metric that measures the distinct number of undergraduate and graduate students registered in at least one fall term class as of the first day of the term. The percentages measure the change of enrolment from the previous year to current year.

Purpose To inform on the levels and trends of undergraduate and graduate enrolment on the first day of the fall term.

Enrolment By College/School

Description Headcount broken out by colleges and schools for undergraduate and graduate students. The percentage measures the change of enrolment from the previous year to current year.

Purpose To inform on enrolment headcounts and trends for colleges and schools.

New Students

Description New students include first time students, transfers from other post-secondary institutions and graduate students who recently completed an undergraduate degree at the UofS.

Purpose New student enrolment is a leading indicator of future total enrolment as well as a metric of sustainability.

Student Origin

Description Student origin shows the percentage of students who came from Saskatchewan, other Canadian provinces or international countries based on students high school, post-secondary or admission addresses.

Purpose To inform on the diversity of the student population based on origin

SK Rural The percentage of students from rural Saskatchewan determined by their initial address postal code.

Teaching Activity

Description Teaching activity measures the number of student registrations in classes as of the first day of the fall term. The percentage shown measures the change of teaching activity from the previous year to the current year fall term. Teaching activity uses three credit unit equivalent (3CUE) as a metric.

Purpose To inform on teaching activity trends as an indicator of sustainability.

Three Credit Unit A teaching activity metric that calculates the number of student in class combinations using academic three credit unit equivalent (3CUE) as a basis.

Equivalent A three credit unit equivalent is the number of academic credits a student receives in a class divided by three. A three credit unit class section with 10 students would count as 10 3CUE's while a one credit class with 12 students would count as four 3CUE's.

Indigenous Students

Description The information on Indigenous students was developed using voluntary student self-declaration data. Self-declaration data is based on an individual's own determination of Indigenous membership to their Indigenous community which has not been verified as part of the self-declaration process. A new university policy has been approved which will address Indigenous verification of membership/citizenship with documentation.

Purpose To inform on the enrolment trends of Indigenous students and the diversity of the student population.

International Students

Description International students are students who are not Canadian citizens, permanent residents or refugees such as students on a visa, inbound international exchange and visiting international research students. The pie charts show the percentage of international students out of total students. The other percentages measure the change of enrolment from previous year to current year.

Purpose To inform on the enrolment trends of international students and the diversity of the student population.

Top Five Countries

Description A list of nations having the highest undergraduate and graduate international student enrolment as determined by the students citizenship. The percentage shown measures the number of students from a particular nation as compared to the total number of international students.

Purpose To inform on the diversity of the international student population.
